

## Self-Service POS

### Speed up service with Self-Serve

Proven to reduce queue lengths during busy periods by promoting self-service payment, this POS terminal is a standalone device designed to be customer-facing and easy to use.

Capable of accepting all types of payment from credit/debit card to cashless ID card, the Self-Service POS allows customers to rapidly make their way through the point of sale, making the most of their mealtime.

***"40% of all our transactions are performed on six Self-Service POS. Three of our catering team can now be focused on other productive aspects of the food service operation."***

### Pay Your Way

The Self-Service POS can accept a variety of payment types to suit your organisation. A Cashless Card Reader can integrate with the terminal allowing customers to pay by tapping their ID card or wristband. They could also pay with credit/debit card with integrated PDQ's that can accept both Contactless and Chip&PIN payments. You could even choose to accept payments by mobile, vouchers or traditional cash.

## Minimalist Aesthetics

With no intrusive base, stand or foot, the Self-Service POS frees up space beneath the terminal's touchscreen combining minimalist aesthetics and ease-of-use, as well as lower power consumption.

Its glossy polycarbonate finish comes in a range of seven modular colours to provide the final touch to your self-service environment.

**"With our 5-year fit for purpose guarantee"**

## Un-staffed sales

Our Self-Service POS solution provides benefits for both staffed restaurants and un-staffed locations, such as Grab & Go outlets. In staffed locations, Self-Service POS augment or replace cashier-staffed checkouts. The POS has a unique design that allows a staffed station to quickly convert to a self-service station, suitable for after-hours sales of pre-packaged products.

In un-staffed locations the Systopia Self-Service POS is an affordable solution that provides foodservice management with real-time sales data and inventory levels, and remote monitoring capability.

## Real benefits

- Increased customer throughput during peak serving times
- Reduction in required staff (or reallocation of staff to other tasks)
- Ability to sell after-hours and on weekends; 24/7/365 revenue generation
- Increased accuracy of items sold with UPC and barcodes
- Higher customer satisfaction with shorter queues and after-hours purchasing
